

5

REASONS HOSPITALS CHOOSE ELECTRONIC CODE DOCUMENTATION

1 ACCURATE EPI AND CPR TIMERS

No more fumbling for your watch or squinting to see the clock – with the press of a button, RescueNet® CodeWriter notes the exact time for you.

2 INTEGRATED CODE DOCUMENTATION

The documentation file from CodeWriter is linked to the defibrillator record. The timelines are merged and can be viewed with RescueNet® CaseReview for data-driven debriefing and continuous quality improvement (CQI).

3 LEGIBLE DOCUMENTATION WITH ACCURATE DRUG DOSAGE AND TIMING

Codes are hectic. Too often, that leads to quickly scribbled notes that are hard to read. CodeWriter takes the pencil and paper out of the documentation process, so all your notes are clear and legible.

4 REAL-TIME REVIEW

Keep separate, adjacent timers for CPR and drug administration on the screen. No need to keep track of timing several different events; CodeWriter handles it for you.

5 POWERFUL ANALYSIS

Take a deep dive into how you and your team perform on each code. Analyzing the most accurate data will help you improve patient outcomes.

Create custom trend reports and simplify monthly reports for code committee or staff meetings.

CodeWriter works with RescueNet CaseReview as part of the RescueNet CodeNet system. Documentation is taken from CodeWriter and linked to the associated defibrillator record. Information from both can then be merged and viewed in RescueNet CaseReview.
